Dr. Rajendra D. Kanphade
M.E. Ph.D. (Electronics Engg.)
LMISTE, FIETE, SMIEEE
Principal

Institute Distinctiveness

Industry perspective curriculum mapping:

Project work is one of the most important activity of the curriculum for an Engineering Graduate. Right from selecting the topic to report preparation, is a journey that has to be completed systematically by following standard procedure. Keeping this in mind, institute is taking special effort to make student aware of project activities right from second year. Under each module, team of subject expert frame problem statements and distribute it to the group of interested students. Team is comprised of SE to BE students. Based on skill and expertise, work is allocated by project mentor to the students. All students are carrying these activities under different student clubs. The club coordinator monitors the activities and provide infrastructure and resources. These activities provide platform to students to explore their team work, creativity and management skills. It also helps them to learn with peer group. The project mentor encourages students to participate in national and industry sponsored competitions. The mentor helps the project group to enroll for reputed competitions and prepare documents. These initiative proved very successful in last three years. Many groups participated in AICTE hackathon, KPIT sparkle and many other prestigious competitions, many groups have brought prizes for institute. The talent of the student is acknowledged by many companies and they offered jobs to them. This imitative created a very competitive atmosphere in every department and motivated many students to participate in technical club activities. It also gave student confidence to face the job interviews and enhance required skills. The impact of this there is significant growth in placement for last three years
